

Image hex-code generator Ver.1

(tested in Acrobat Pro 8)

Step 1: click the button and choose an image file

Step 2: enter the dimension of the image.

Width (px)

Height (px)

Step 3: click the button to write the hex-encoded data of the image to the file "heximg.txt" attached to the document.

Step 4: open the File Attachments Panel, click on the file "heximg.txt", open it in an external plain text editor and copy the content to your script.
